

CANOPIES

Alu-Cab started out building aluminium canopies, although we offer a wide range of innovative off-road gear these days, we still pride ourselves on being canopy specialists.

- Aluminium vs Fibreglass: Our canopies are manufactured from aluminium which has superior strength to weight ratio, thus it is lighter than most of the popular fibreglass competing products. This inherent strength allows the Alu-Cab canopy to carry more load than any other canopies.
- Aluminium VS Steel: The Alu-Cab Canopy is much lighter than any of the steel canopies available on the market, for example, the Alu-Cab Canopy for the Ford Ranger DC is up to 40% lighter than the competitors steel canopy.
- The Alu-Cab aluminium range of canopies offers the perfect solution for daily use, work, utilities, expeditions, hobbies, sport, holiday, camping and other application one sees fit.
- Due to the large range of accessories that we offer our customers are able to convert their canopies to suit their different needs.
- Alu-Cab Canopies are very easy to fit, even an un-trained fitment team will be able to fit the canopy in less than 45 minutes.
- This fully recyclable metal doesn't rust or weather.
- Besides the advantages of aluminium construction, our canopies have been designed for ease of use, with 3 doors opening up for easy access to your load-bin. Inside the canopy, the roof cross braces double as tie-down rails, as does internal base frame, so you can attach accessories to the canopy's interior, sides or roof without any drilling. Or you can use the tie-down rails as lashing points to secure your cargo.

This versatility means that it's entirely possible to use your canopy as a workhorse during the week and an overlanding unit on the weekends and holidays. The best of both worlds!
